# Jetstream2: Accelerating cloud computing via Jetstream

**David Y. Hancock – Indiana University**

Director for Advanced Cyberinfrastructure

Jetstream & Jetstream2 Primary Investigator

PEARC21 – July 20, 2021

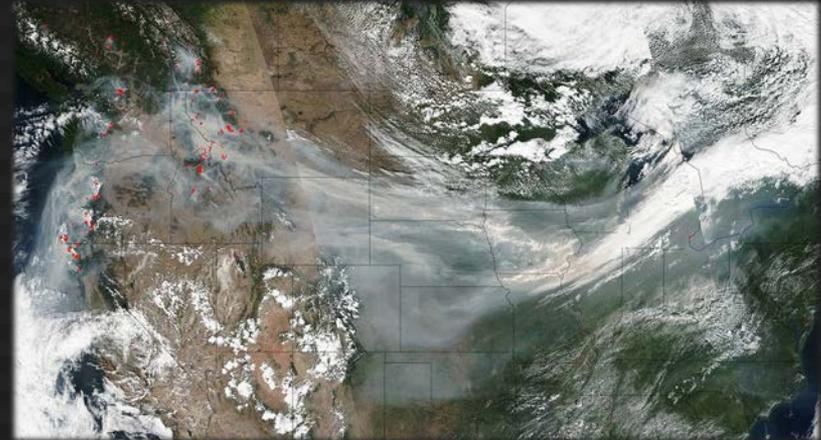

# What is “the” Jetstream?

- Fast moving air currents
- Hot/Cold air boundaries
- An NSF-funded cloud environment

Suomi NPP satellite collected this natural color image using the VIIRS (Visible Infrared Imaging Radiometer Suite) instrument on Sept. 4, 2017. Actively burning areas are outlined in red. NASA image courtesy Jeff Schmaltz LANCE/EOSDIS MODIS Rapid Response Team, GSFC

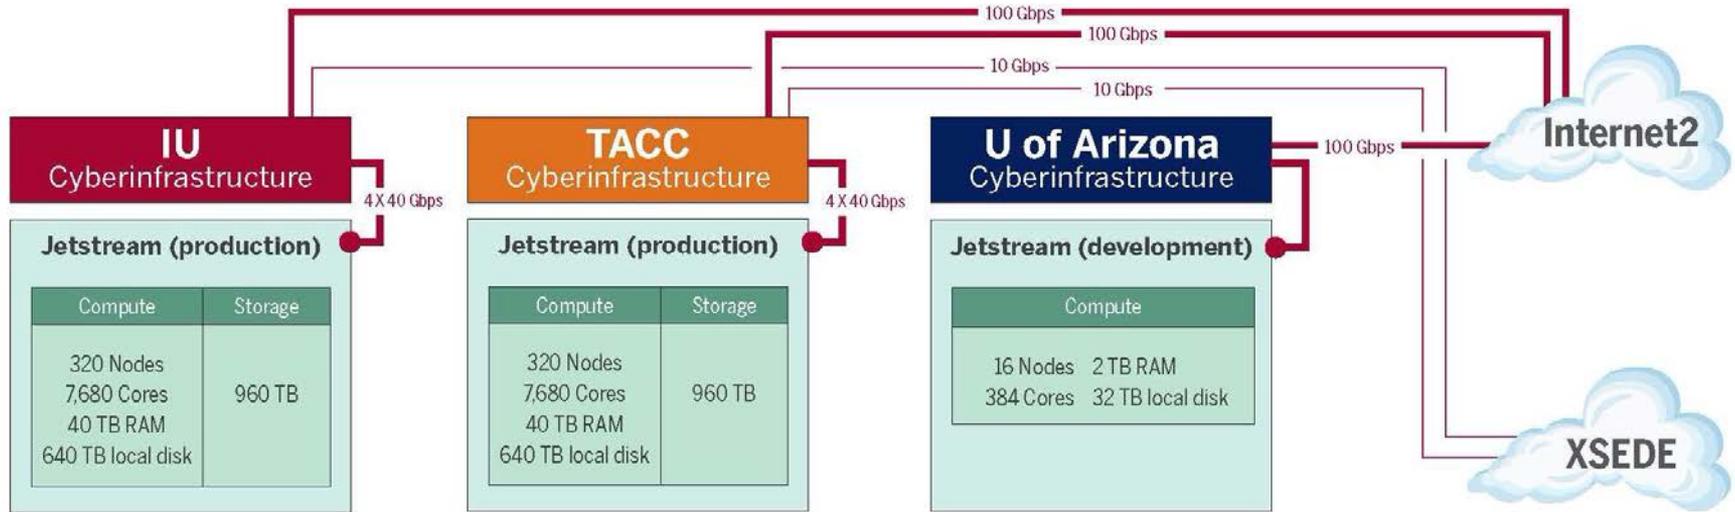

# What is Jetstream2 and why does it exist?

- Significant evolution of the Jetstream cloud resource
  - Under 10% NSF investment → support for 24% of institutions, 23% of active PIs, and 32% of users\*
  - Jetstream has provided **6x more** SUs than **any other** XSEDE resource for Education
  - Emphasis on ease-of-use, broad accessibility, *AI for Everyone*
  - Will provide **on-demand interactive** computing and persistent services for science gateways
  - Enables *configurable* environments; *programmable cyberinfrastructure*
- \*Based on XDMoD data at Workload Analysis Report: <http://arxiv.org/abs/1801.04306>

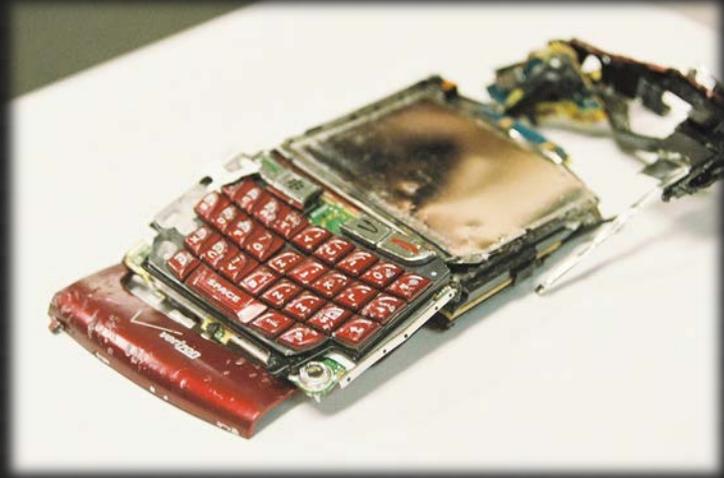

# Jetstream [1] System Overview

## What worked?

- Allowing API access and full control (root privileges)
- “Indefinite workflows” – allowing instances to run continuously – providing PIs renew their allocations
- Development of trial allocations

Flickr user MattHurst – Broken Blackberry

## What didn't work?

- Forcing small allocations into the research allocation process
- Lack of multi-year allocations
- Lack of shared data set storage

# Lessons learned

## Challenges -> Inspired changes

- Storage capacity -> Larger HDD pool and new flash storage
- Homogeneous hardware -> Inclusion of NVIDIA GPUs (w/MIG) and memory diversity
- Separate OpenStack domains -> Unification of “Atmosphere” domain
- Virtual networking architecture/maintenance -> Increase offload capabilities via Cumulus Networks software and Mellanox hardware (NAT & simulation)
- Acceptance & integration into national CI ecosystem -> Changes to our metrics/KPIs & accounting processes
- Deployment diversity -> Leverage single technology for config management

D.Y. Hancock – Castello di Nipozzano 2017

# Jetstream2 Capabilities

Enhancing IaaS model of Jetstream:

- Improved orchestration support
- Elastic virtual clusters
- Federated JupyterHubs
- Ease storage sharing (CephFS w/Manilla)

Commitment to >99% uptime

- Critical for science gateway hosting
- Hybrid-cloud support

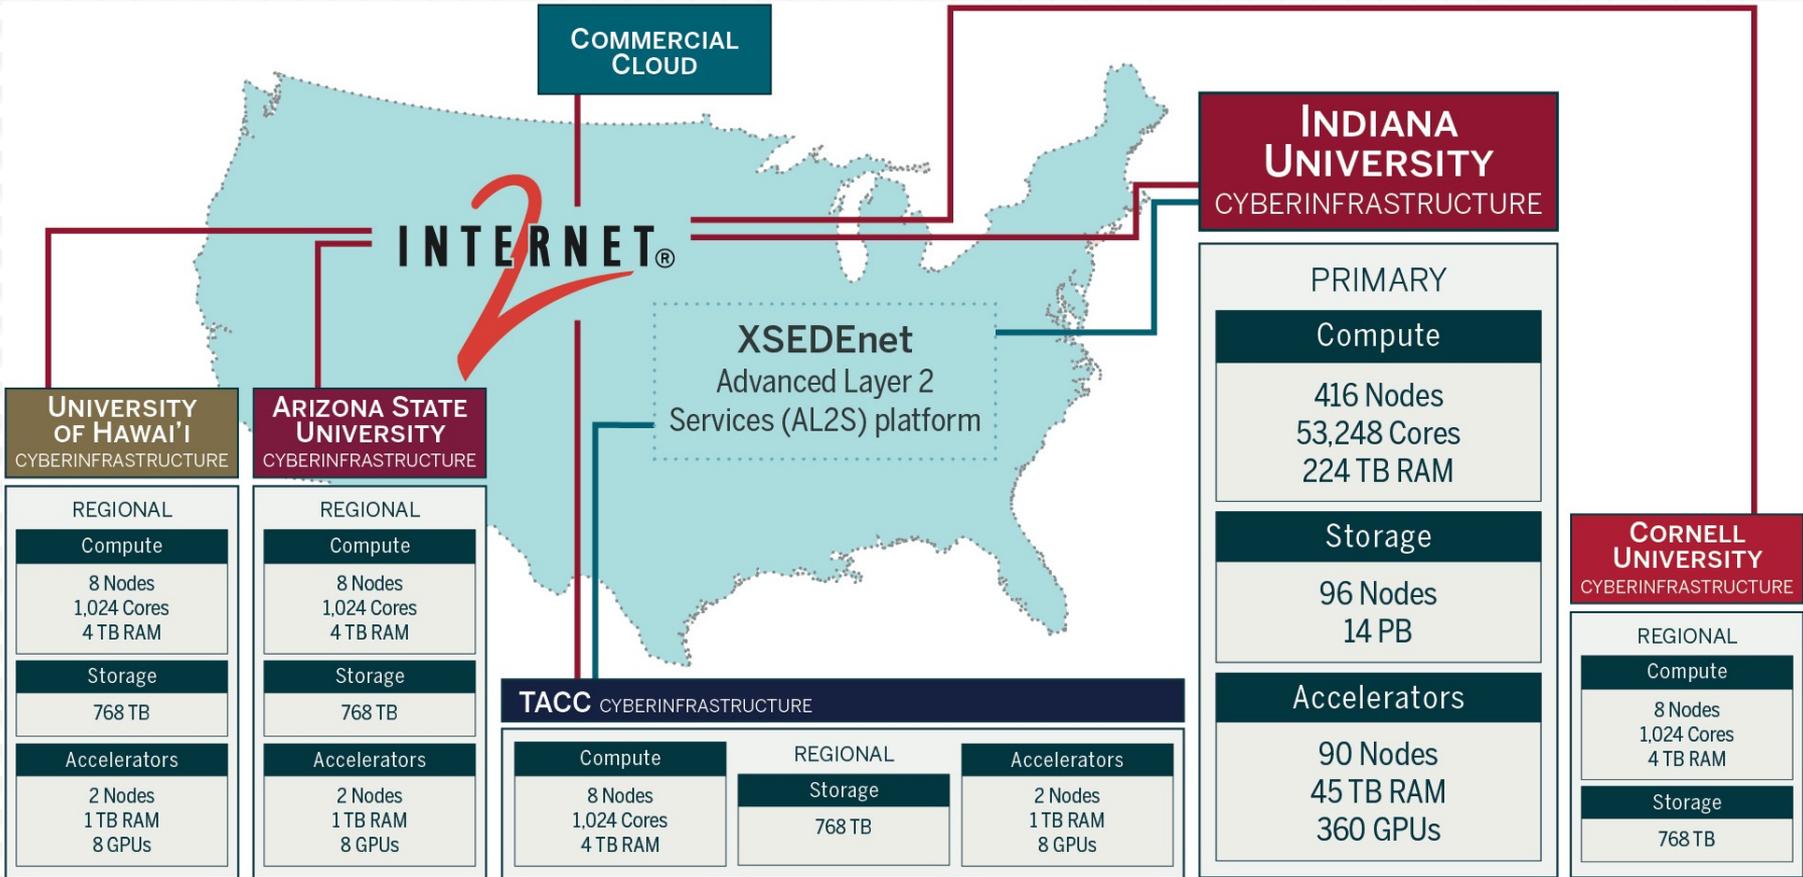

Revamped User Interface

- Unified instance management
- Multi-instance launch

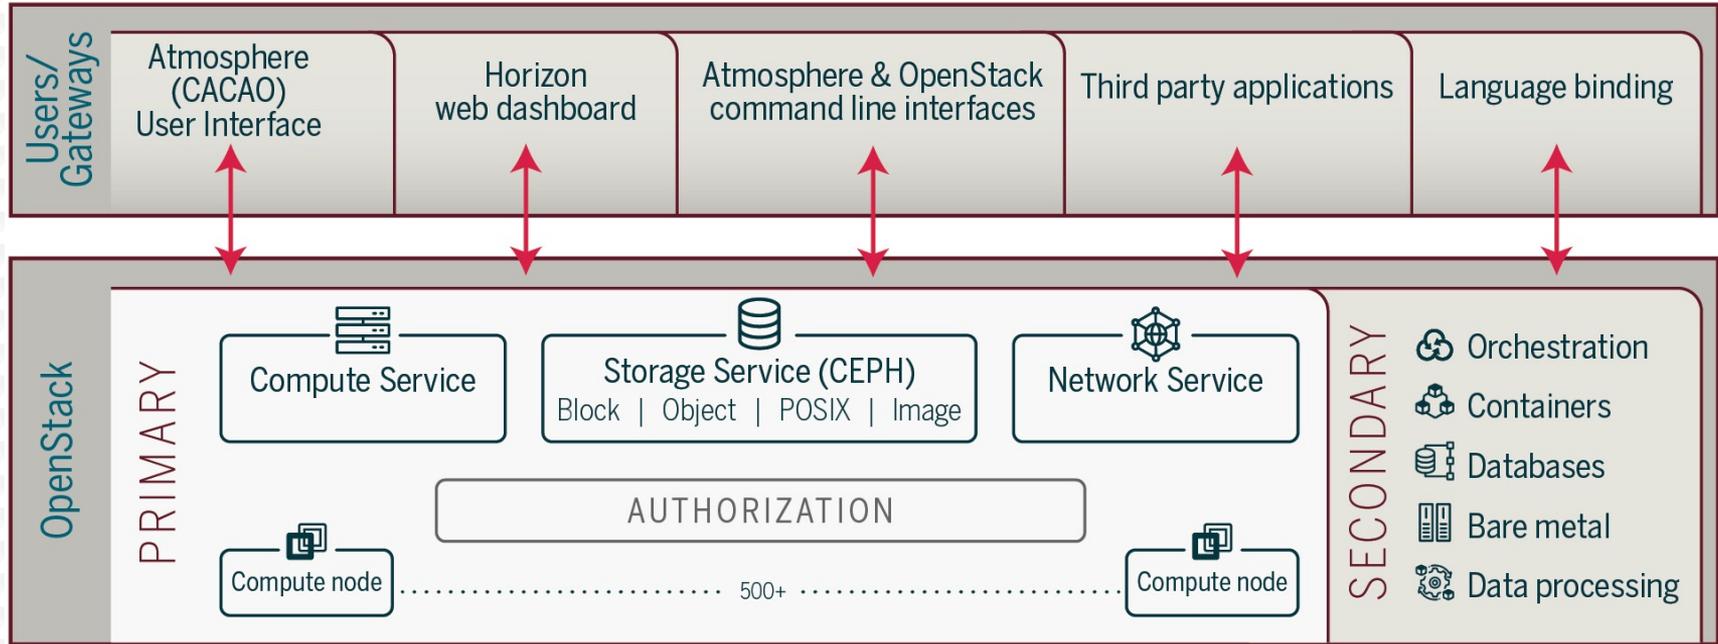

Feb 12, 2019 – Jet stream region called “Jet N6”  
NASA/JPL-Caltech/SwRI/MSSS/Kevin M. Gill

- >57K cores of next-gen AMD EPYC processors
- >360 NVIDIA A100 GPUs will provide vGPUs via NVIDIA’s MIG feature
- >17PB of storage (NVMe and disk hybrid)
- 100GbE Mellanox network

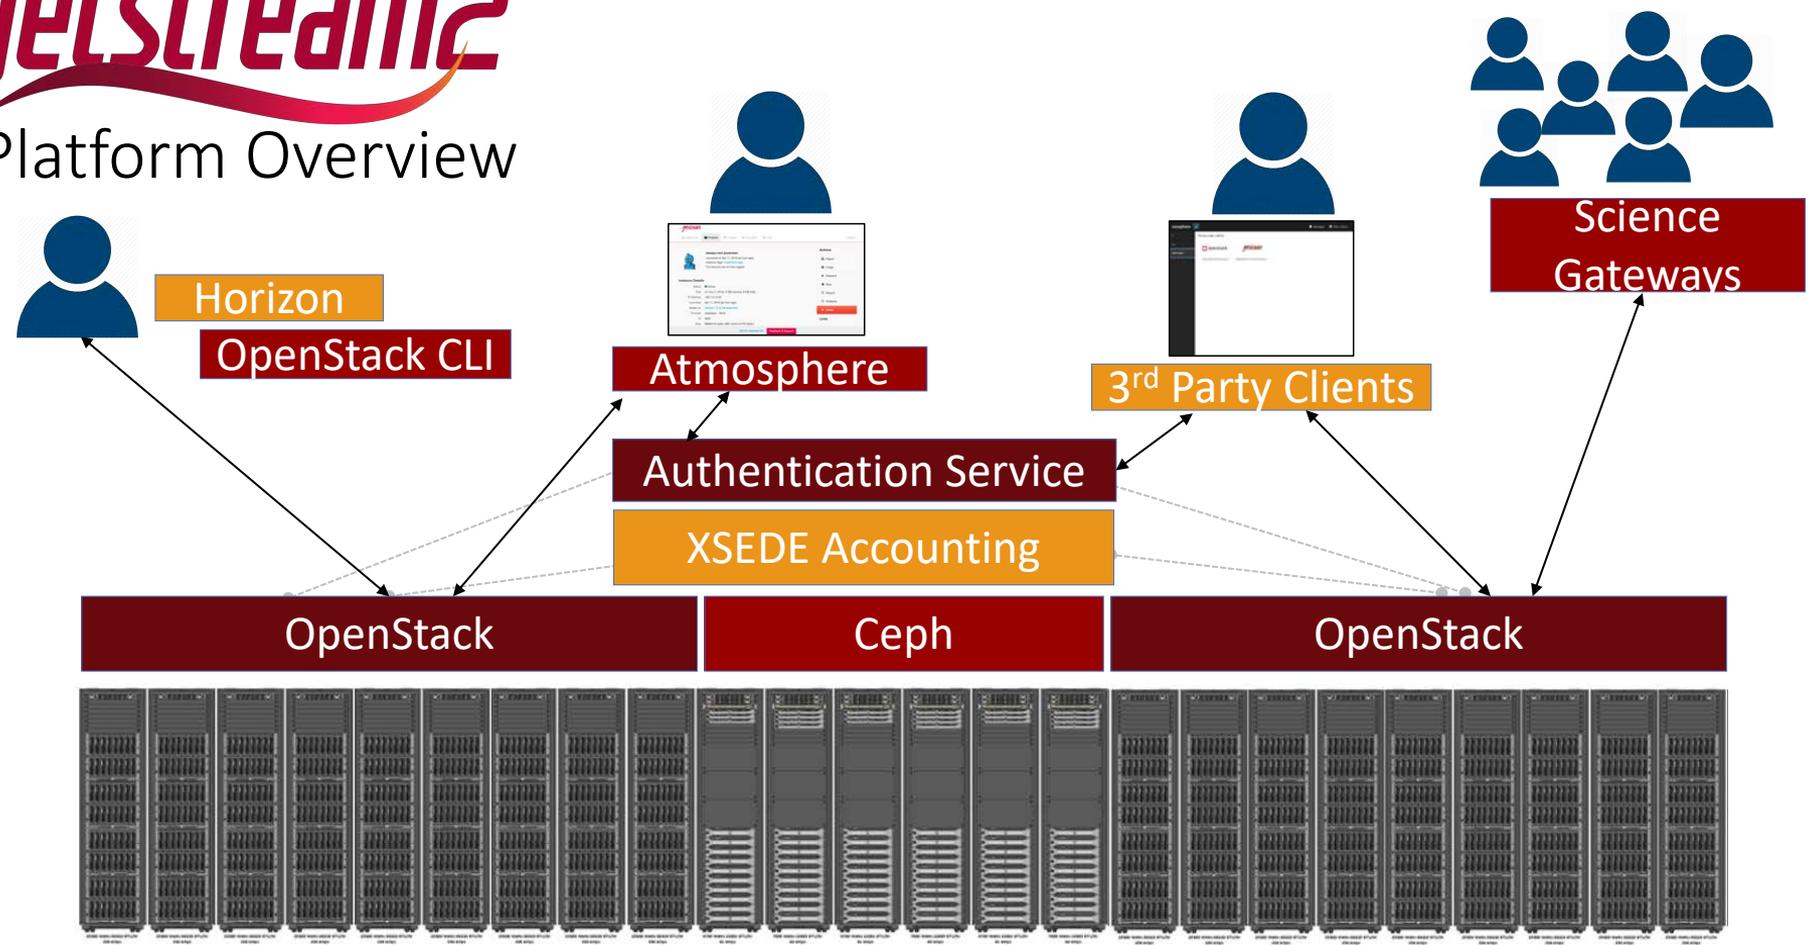

# Conceptual Jetstream2 Architecture

# Jetstream2

## Platform Overview

Jetstream2 Core System

# Timeline

- Jetstream now in 5th year of operations
- Jetstream extension granted by the NSF through November 2021
- Extension through March 2022 in process
- Jetstream2
  - Early operations planned for December 2021
  - Production operations by January 2022
